

First design studies how the well-known P3-structure of AO-10 and AO-13 might fit onto Ariane's ASAP-5 structure for P3E

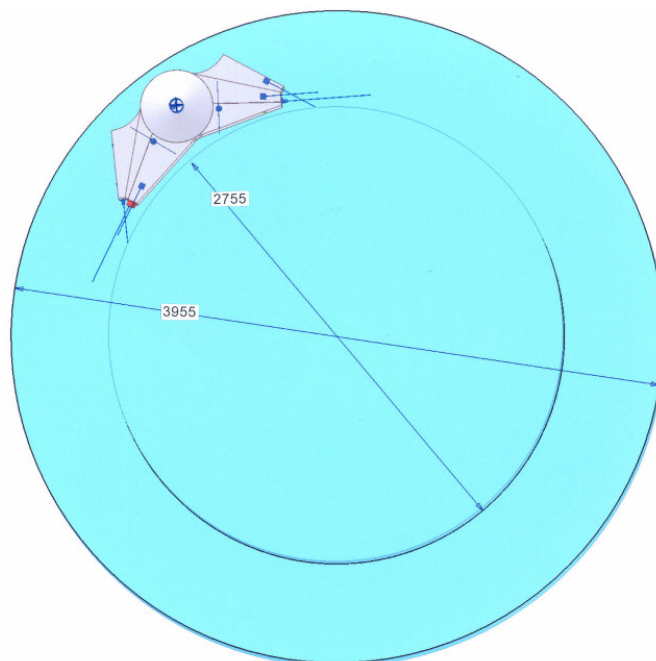

The former and well-known P3-structure of P3A, AO-10 and AO-13 could suit the needs of P3E.

The P3-structure with one folded arm on top of the ASAP-5.

Demonstration how the third arm of the earlier P3-structure can be folded to the fix arms during launch.

Spacecrafts must fit in between the inner and outer circle of the ASAP-5 spaceframe.
